# WEEKLY HEALTH REPORT

## CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

WEEK ENDING 18 SEPTEMBER 1943

The purpose of this report is to call attention to the most recent data of current significance in regard to health conditions and hospital facilities in Army posts in the continental United States.

### MORBIDITY DATA

In this report admission rates are shown for all causes (disease, injury and battle casualty) combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparison with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per 1000 mean strength which would occur over a year's time if the current week's experience continued through the year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended to the report is a list of cases of the rarer communicable and certain other diseases.

### HOSPITALIZATION DATA

The number of patients remaining in hospital at the end of the week per 1000 strength, as given in this report, furnishes an approximation of the current non-effective rate. Current hospitalization conditions are presented in terms of bed capacity and beds occupied. Only beds in general and station hospitals are here considered; beds in dispensaries, convalescent facilities, venereal disease facilities and college training detachments are excluded.

### CURRENT TRENDS

AS INDICATED IN THE CHART ON THE OPPOSITE PAGE, THE ADMISSION RATE FROM ALL CAUSES COMBINED AS WELL AS THAT FROM ALL DISEASES COMBINED DECLINED FOR THE THIRD CONSECUTIVE WEEK. THE ADMISSION RATE FROM ALL CAUSES COMBINED WAS AT THE LOWEST LEVEL SO FAR REPORTED IN 1943 WHILE THE ADMISSION RATE FROM ALL DISEASES COMBINED WAS ONLY FRACTIONALLY HIGHER THAN FOR THE WEEK ENDING 10 JULY. BOTH OF THESE ADMISSION RATES FOR THE WEEK ENDING 18 SEPTEMBER WERE NEVERTHELESS ABOUT 5% HIGHER THAN DURING THE CORRESPONDING WEEK IN 1942. THE ADMISSION RATE FROM COLDS, INFLUENZA, ETC. HAS RECENTLY BEEN RUNNING SOMEWHAT BELOW LAST YEAR'S LEVEL.

### EXPLANATORY MATTER

In reading the detail tables, it should be noted that any admission rate followed by a question mark (?) denotes a rate which has been computed on the basis of 5 or fewer cases. Such rates are unreliable as indications of trend. The symbol # has been placed after the name of stations (or groups of stations) where part or all of the data for the current week have not been received and the latest available figures have been substituted therefor. The symbol ! has been placed after figures (shown as reported), verification of which has been requested from the reporting unit.
